

LST - POLSKA

LST Polska - your partner for fruitful business!

LST-Polska is a private owned company established in 2002. It's owner and President is Leszek Szewczyk. The coldstore is located in eastern part of Poland, rural region with long-term tradition in growing and processing of berries.

The factory with capacity of 7 thousand tons per season is duly equipped to obtain high quality products – healthy, safe and packed according to Customer's needs. It comprises:

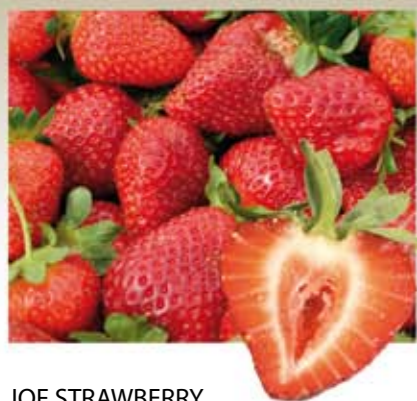

- pre-cooling chamber for fresh fruit storage
- 2 ammonia tunnels for quick freezing – production output 7 tons/h
- chamber for static freezing
- line for production of raspberry griss equipped with 2 sorting machines (optical + laser)
- sorting lines for small berries and raspberries with 2 laser sorters
- 3 lines for manual sorting and packing of raspberry whole
- warehouse chambers for storing deep-frozen products (capacity 5.000 t) which allows to store the goods and supplying them just-in-time to the Clients
- automatic packing line for foil bags (400 – 2500 g)
- packing line for punnets
- line for production of sliced frozen champignon

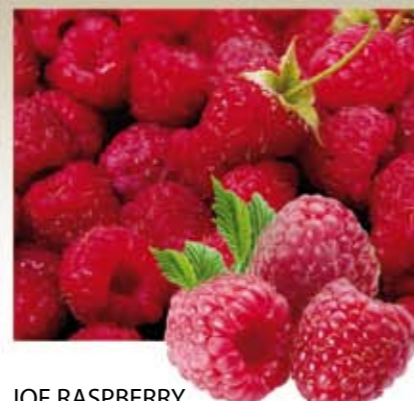

We do care about the best quality of our product on all stages of its production:

- our Coldstore has been granted Certificate for compliance with the requirements of British Retail Consortium since 2009 (A level)
- we do care about sustained improvement qualification of our employees so that they are capable to answer effectively demands of our Clients
- agricultural character of Lubelskie region, lack of heavy industry results in clean, ecological environment for cultivation plants, being the source of our raw material. We are also certified for collecting and processing of organic (BIO) products
- we work with the farmers on the basis of long-term contracts, using a wide network of own collecting points
- close proximity to plantations allows for shortening to minimum time between picking the berries and their freezing, so they can retain their natural freshness and vitamins
- we control continuously organoleptic parameters of processed product. MRL, microbiology, heavy metals analysis are monitored by accredited laboratories.
- our sorting lines are equipped with 4 new-generation sorting machines (laser and optical) to achieve the maximum level of cleanliness: product free of any organic or foreign impurities, evenly ripen and coloured, w/o shape defect. Moreover on all the lines magnetic bars and metal detectors have been installed. We want to be sure that our final products are safe for the life and health of the consumers.

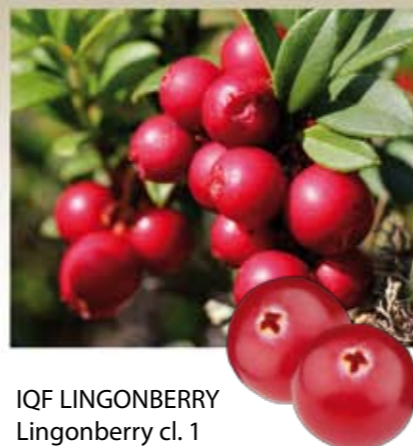

IQF STRAWBERRY
Uncalibrated (cl. 1, cl. 2)
Callibrated (<15, 15-25, 25-35, >35)
Jam, puree or pressing quality
