CO₂ GEL Face

Patent : 10-1037595

 DAE JONG MEDICS Co.Ltd

The CO₂ gel face had been used to treat scars at first but it was later found to be effective in reducing subcutaneous fat, and subsequently proved to contract size of the face. It is also proven to be effective in improving freckles, acne and a topic dermatitis.

■ New Technology of CO₂ GEL Face

CO₂ GEL Face consists of gel and sheet mask. Just by combining these two, CO₂ is generated. It is then quickly and effectively absorbed into the skin. Reaction of the gel and mask takes 20 – 30 minutes to be effectively absorbed into the skin

■ CO₂ Absorption Effects

CO₂ promotes an increase of O₂ supply that is required for cell metabolism. When CO₂ is absorbed into the skin, the more O₂ is supplied to the skin texture and metabolism of skin is palpated.

Effect

- Vasodilator
- Active protein synthesis
- Palpated fat metabolism
- Palpated body waste discharge

Removing

- : Dark and sordid
- : wrinkles, drooping
- : sagging, partial obesity
- : wrinkles, freckles, acne, edema

Physiological action / effect of CO2 Gel Face

■ Face Slimming Effects

One of the major skin elements is called phospholipid which is formed in double layers. With CO2 GEL Face, CO2 is generated by combining the mask and the gel, and is absorbed into the phospholipid layers by the defusing de-gassing structure (DDS). CO2 then densifies the tissues by the slimming effects. Effortlessly unlike an exercise to slim, you can easily benefit from the face slimming effects.

■ Vasovagal reaction

The vasovagal reaction improves blood circulation of the skin by vitalizing metabolism of the skin cells for healthy skin. Healthy skin is essential to make skin beautiful. This is one of the reasons why CO2 makes skin beautiful.

■ Anti-inflammation effects

Inflammation often results in rough skin. The skin condition can be improved by inhibiting inflammation. Although acne cannot be treated directly by CO2, CO2 can inhibit inflammation and help natural healing.

■ Improving Blood Flow

Red blood cells must reach every part of the capillary vessels around the skin, and blood must flow well to supply oxygen to each and every cell. CO2 absorbed into the skin works to purify the blood.

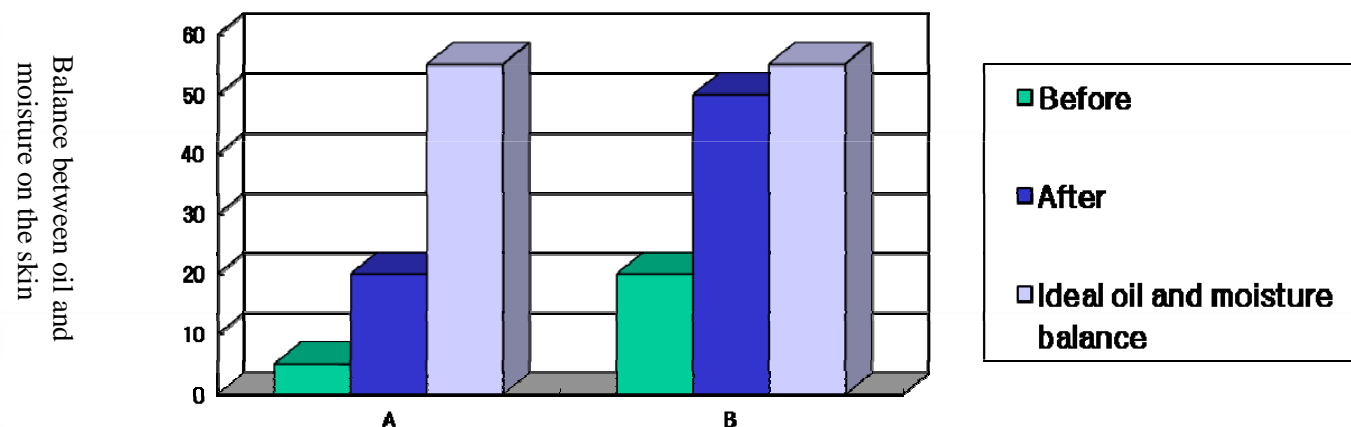

■ Bohr Effects

Vitalized metabolism by CO2 is realized by increased oxygen supply from the red blood cells raising the oxygen partial pressure inside the tissue. More oxygen the more active metabolism and stronger the self-renewal hence skin troubles, ageing and scars could be better dealt with. CO2 easily reaches blood vessels from skin, and melts in the blood helping hemoglobin to carry more oxygen to cells.

■ Moisturizing Effects

CO2 GEL Face helps balance between oil and moisture on the skin for ideal skin conditions.

[Balancing between oil and moisture on the skin:
Before and After CO2 GEL Face]

■ Deep Moisturizing & Anti-Ageing Effects

The well known basic skin protection is to supply and maintain a moisture of skin. Supply of moisture to skin is an absolute essential. Furthermore, keeping the moisture within the horny layers of skin is very important. The product has been developed especially for use in dry seasons like autumn and winter and for the benefit of those with a dry skin. CO2 GEL Face is an excellent product for keeping the balance between oil and moisture. Against phenomena of face lines and roughness due to dryness, slowing metabolism and ageing, CO2 GEL Face effectively helps revitalize your skin to the healthy condition.

CO2 GEL Face acts as a prevention of such ageing phenomena.

CO₂ GEL Face

in the simple sheet mask format offers the similar effects found in the carbon dioxide therapy.

Daily use of the product for the first week and 1 or 2 uses per week from the subsequent weeks can expect sustainable effects.

Most of other products are thinly applied to the skin as they generate membrane on the skin surface or absorb into the skin. However CO₂ Gel Face applies the CO₂ containing gel to the skin without creating a membrane and therefore sufficient amount of the gel must be applied for the best result. Furthermore, use of a thick gel layer is essential as CO₂ is easily evaporated into the air. (Use the whole lot of gel out of the container.)

■ **Effects:** face contour contraction, brightening, O₂ supply, melanin pigment inhabitation, mitigating acne, moisturizing

■ **Product Features:** Integrated with medical technologies, CO₂ Gel Face, a facial mask generating CO₂ by combining gel and a mask, capturing CO₂ inside the media (gel) and penetrated into the membrane or skin, is an epoch-making system for efficient substance migration.

■ **Ingredients:** water, glycerin, anhydrous caffeine, ivy extracts, sodium bicarbonate

■ To Use #1

1. Wash and cleanse your face.
2. Thoroughly and thickly apply the whole contents of the gel to the face. (Each time, use the whole container lot to apply thickly to the face.)
3. Place a sheet mask closely onto the face. In about 10 minutes, pat skin with fingertips to ensure full absorption.
4. In 20 – 30 minutes when the CO₂ effects finish, remove the mask.
5. Remove the remaining gel off the face with a tissue paper and rinse off with warm water.
(For better effects, keep the gel in the refrigerator.)

You may feel stinging or a heavy sensation during the use of CO₂ GEL Face, and your face may get partially reddened. This is not a side effect. It is due to the quickened blood circulation which raises the skin temperature. (Within a few minutes the skin will recover its natural tone.)

■ To Use #2

Skin Brightening

The skin brightening effects are visible just in 15 – 30 minutes after using the mask. For sustainable effects, it is recommended to continue to use the product every 2 – 3 days. For sensitive skin with acne or spots, daily use is recommended for a month.

Partial Slimming

Modern women are interested in small and longish face as well as brightened face tones.

The CO2 facial mask is also effective in swollen eye lids. Use at least twice a week and you can have the visible effects although it varies from one skin type to another.

Skin Texture Improvement

You can feel the difference in the skin tones and texture after using the mask. For those with progressing wrinkles or ageing use the product daily for the first 7 – 10 days and 2 – 3 times a week from the subsequent weeks. It takes at least 3 weeks for artificial protein such as collagen to be palpated to inhibit skin ageing and wrinkles.

■ Constantly Palpated Metabolism

The thermodynamic principle has been applied to the absorption ratio and sustainability of CO2 in development of a new technology for CO2 GEL Face. Highly dense CO2 stimulates metabolism quickly reacting to sagging or swollen skin with long lasting effects.
