- manufacturing of injection and blow moulds
- imprints and embellishments

Packaging is a key marketing element. It is a visual mean of communication that attracts attention, identifies producers and informs customers about products content. External features of packages are extremely important, as most customers responds mainly to visual stimuli. Obviously, product quality is always one of the most basic elements of successful trade. Therefore, packaging as an integral part of a product has a great impact on its quality.

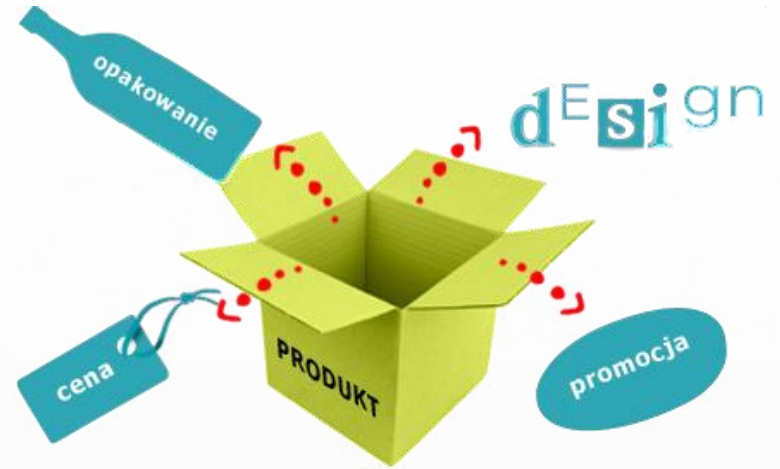

Packages increase sales results and they should differ from others, whereas product presentation should win buyers trust.

Well-designed packaging and labels increase chances for good sales results.

Solplast helps companies differentiate their products from others on the market.

Our concepts are well-thought out with respect to marketing, costs and logistics.

Packaging Design

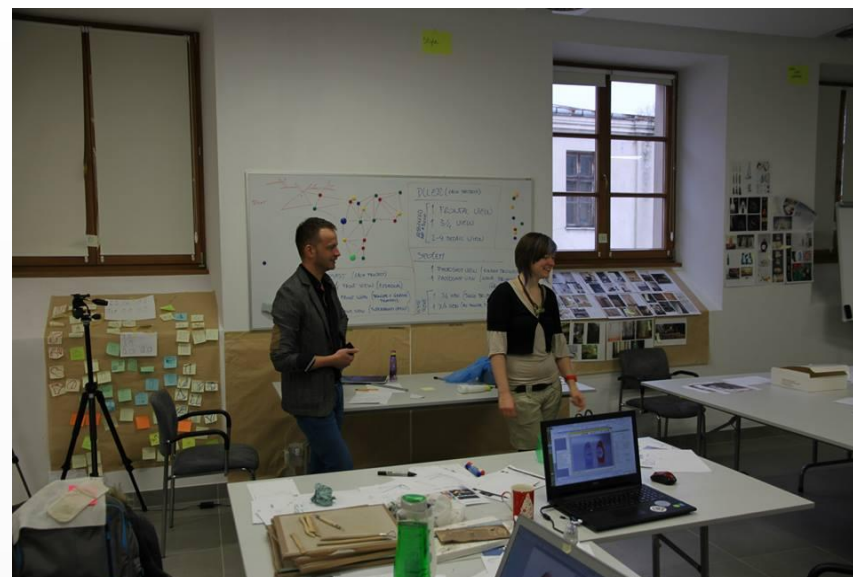

Teamwork

When the team plans to develop a particular packaging it starts analyzing trends, competition, and it tries to find the best possible technological solution as well as marketing message.
