SMART ASIA Taiwan

a B2B trade show platform to connect city policy makers & solutions suppliers. Supported by Taichung City Government, organized by TAITRA, the exhibition will showcase 3D Sensors, Controllers, Cloud Computing, AI, IoT, Big Data Analysis, 5G, and other technologies that help cities manage their projects and services more effectively. We're now calling for exhibitors and sponsors, so sign up and get worldwide exposure to first-class visitors!

Potential Visitors:

E.ON SE, Cross Border Planning, IHI Corporation, Eiger, Cloud vision, Innotech Digital Solutions, Ambtronics Engineers, New Horizon, Unique Controls...etc.

Building the Taichung Gateway as the Smart City Demo Site

Shuinan Economic and Trade Park (Taichung Gateway Park) is a major brownfield redevelopment project covering an area of 254 ha. It will host a business park, intelligent operation center and multiple facilities with renewable energies and smart management system. Taichung city is now eager to seek out any solutions that would be applied, such as smart parking, smart shared traffic signals/light poles, and smart building concepts.

Current Smart City Policies

Smart Industry

Taichung is a stronghold of Taiwan's machine industry. In accord with central government policies, more than 1000 precision machinery factories are aiming to upgrade to smart manufacturing. Corporates like Siemens, Microsoft and Philips have shown their interest by collaborating with the local institutes.

Smart Transportation

The city has established smart response and traffic control center to develop smart solutions which can control road networks, transportation tool management, parking, towing, and traffic maintenance systems.

Smart Aging

The city information center has integrated existing senior citizen mobile classrooms, elderly learning centers, free computer classes, and other resources to become a senior citizen-friendly city.

Don't miss out on this great opportunity to showcase your latest products, services, and solutions!
