Calmapherol – a line of preparations for irritated, reddened and sensitive skin.

Calmapherol Regular cream for irritated skin with micronized zinc oxide.

Calmapherol TAN Lotion drying liquid with tannin, talc and zinc oxide.

Calmapherol Mousse for skin irritated on large body surfaces.

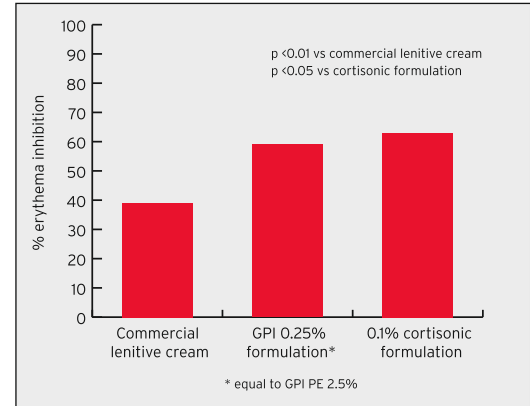

Calmapherol S.C. cream, ointment, gel are non steroidal products with active salt of choline GPI which can be an alternative to low dose of steroids product.

According to the article:

„Sali di glicerofosfoinositolo Un’alternativa cosmetica ai cortisonici topici Parte 1. Eritema cutaneo”, written by Roberto dal Toso, Francesca Melandri, Stefano Copetti.

Glycerophosphoinositol salt of choline (GPI) reduces the inflammatory reaction of skin to a degree comparable to steroid products. The research also proved lowering of UVB-induced erythema by ca. 60%.

In September 2016, the medical journal - TERAPIA, which is recognized in Poland as one of the most valuable Polish medical publications, issued a scientific paper about the clinical study of Calmapherol s.c. Cream, proving the effectiveness of Calmapherol s.c. in the treatment of atopic dermatitis. „Therapy for atopic dermatitis" by prof. Dr hab. Rafał Pawliczak, MD and Izabela Szymczak MA.

Evaluation of Calmapherol SC efficacy in the treatment of atopic dermatitis. Therapy of atopic dermatitis.

Summary

Introduction: Atopic dermatitis (AD) is a chronic skin disease whose main symptoms are skin lesions, dry skin and itching as well as periods of exacerbation and remission. Clinical symptoms of AD have a significant socioeconomic impact. Key elements of AD treatment are skin care and aggressive anti-inflammatory therapy, when needed. Taken together, they reduce AD symptoms.

Aim: The aim of the study was to assess the effectiveness of Calmapherol SC in AD therapy.

Materials and methods: The study included 77 patients with diagnosed AD. The effectiveness of one control visit based treatment of AD was evaluated during the cooperation between the assessment of severity of skin lesions after applying Calmapherol SC. Patients also assessed the severity of itching and sleep disorders.

Results: The improvement of skin condition was observed after therapy with Calmapherol SC in all patients included in the study. Statistically significant reductions of AD symptoms were observed during a control visit after therapy with Calmapherol SC. Moreover, Calmapherol SC is an effective non-steroidal also observed. Conclusion: Calmapherol SC in the skin care therapy of patients with AD. The results support the efficacy of Calmapherol SC in the skin care therapy of patients with AD.

Atopic dermatitis (AD) is a chronic, recurring inflammatory disease, that is food allergy, allergic rhinitis or asthma. AD is the result of complex interactions between genetic, epigenetic, environmental and immunological factors, coupled with the defect of skin barrier and is characterized by the occurrence of periods of exacerbation and remission (1-3). From the perspective of doctor's practice the AD is commonly diagnosed in cases of children aged 5 or less. It is worth stressing that this disorder can significantly lower both the quality of life of patients, and that of their families, leading to serious socioeconomic consequences (4-8). This means that an efficient AD therapy should first of all eliminate the symptoms of disorder in order to improve patient's quality of life and prevent exacerbations. Due to the exacerbative and chronic nature of the disorder the cooperation between the patient and doctor becomes an important element of AD therapy. Pursuant to the current guidelines of Dermatology Section of Polish Society of Allergy and the Allergy Section of Polish Society of Dermatology, as well as international standards, AD therapy should include the connection of appropriate daily skincare with emollient therapy, avoiding of instaling factors and allergens and anti-inflammatory therapy (9,10). Care processes are a very substantial part of AD treatment (10). Regular skin greasing positively influences the soothing inflammatory reaction and reduces itchiness. Additionally, use of emollient, 5-4 times a day can reduce inflammatory response of corticosteroids (10, 11). Another element of active

„The clinical results confirm the effectiveness of Calmapherol S.C. in skin Atopic Dermatitis disfunctions among patients... It has an innovative and rich composition, it is also very effective in the therapy. Demonstrates anticoagulant and anti-inflammatory effects ... It has proved to reduce sleep disorders ...”

DIETARY SUPPLEMENTS

Vitamins & Minerals

- Supports the skeletal system
- Strengthens teeth
- Increases resistance to infections

- Helps to provide strong bones
- Supports the correct mineralization of bones

- The best absorbable form of magnesium citrate with vitamin B6

DIETARY SUPPLEMENTS

Immune system

- *Fish oil being a rich source of unsaturated fatty acids.*

- *Rutin with vitamin C*
- *It supports the immune system*

- *Contains the probiotic strain Streptococcus salivaris K15*
- *The preparation is recommended in the prevention of recurrent ear, nose and throat infections*

DIETARY SUPPLEMENTS

Digestive system

- *Active carbon with peppermint leaf*
- *Supports the digestive tract*
- *It reduces flatulence and intestinal gases*

- *Supports the proper functioning of the liver*

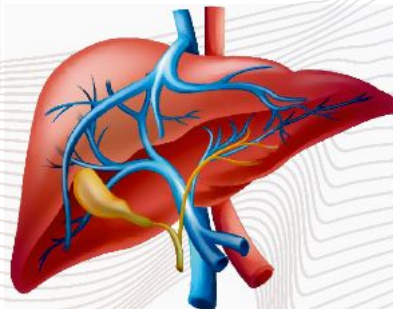

- *Supports digestion*
- *Supports the functioning of the liver*
- *Helps the metabolism of fat*

DIETARY SUPPLEMENTS

Digestive system

- *It helps maintain normal body mass*
- *Supports the proper function of the digestive tract*

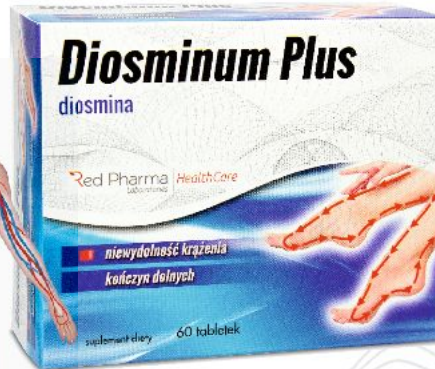

- *Supports the functioning of the liver.*
- *It helps in the metabolism of fats*

DIETARY SUPPLEMENTS

Heart & Circulation

- *Supports venous microcirculation*
- *It increases the flexibility of blood vessels*
- *Restores comfort to heavy and tired legs*

- *Supports the proper functioning of blood vessels.*

- *Supports the proper functioning of the heart muscle*
- *Help delay the ageing processes*

DIETARY SUPPLEMENTS

Bones & Joints

- Supports the proper functioning of joints
- Supports the flexibility of joints

- It reduces spinal problems
- It supports the reconstruction of damaged nerves

- It helps to maintain the mobility of joints
- It improves vitality

DIETARY SUPPLEMENTS

For Seniors

- *Supports the body during weakness and stress*
- *It restores vitality and energy*

- *Supports the proper functioning of the urinary system and prostate*

- *A set of vitamins and minerals in perfect proportions for seniors*

DIETARY SUPPLEMENTS

Others / beauty, physiology

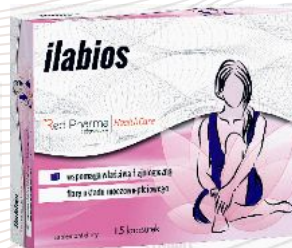

- *Combination of vitamins and minerals helps to improve shiny hair, strong nails and radiant skin.*

- *Sedation pills.*
- *Facilitates healthy sleep*

- *It contains 4 strains of bacteria supplementing the bacterial flora of the gastrointestinal tract*

- *Supports the proper physiological flora of the urogenital systemi and maintain proper vaginal pH*

- *Supports the proper functioning of the eye*
- *It soothes eye strain*

Laboratories

STOMATOLOGY

Natural toothpastes

patents

Zerwall®

Anti plaque & Whitening

Enzymes capable of removing not only calloused skin, but also dental plaque and plaques, as opposed to mechanical pastes containing abrasive substances in the form of particles and granules, which chemically dissolve or scarify plaque. They remove discolorations in a non-invasive way for the structure of dental tissues. Round like ping-pong balls PVP particles remove the plaque softened by enzymes.

Perline®

Enamel repair

Hydroxyapatite + pearl powder + strontium chloride + vitamin D3.

Karie®

Antycaries

Gglucose oxidase + lactoferrin + lysozym with a protective function, inter alia lysozym (or mucopeptide glucohydrolase, mainly produced by serous demilunes, decomposes the bacterial cell wall G(+).
