

**WHAT'S THE PERFECT
ANSWEAR?**

#MOS

ABOUT MOS

MOS was created to neutralise harmful gas pollution and odours. The technology is easy to implement and requires limited pre-installation work. It may also serve as the equipment of other existing installations that emit pollution. MOS cleans noxious gases from any production plant. Used, among others, in the chemical, food, recycling, mining and petrochemical industries. This device effectively protects the natural environment.

- + **WASTE GAS REDUCTION UP TO 99%**
highest environmental standard
- + **COST TO VALUE**
efficient solution
- + **CONNECTED TO EXISTING INSTALLATIONS**
without having to expand the plant
- + **20FT CONTAINER SIZE**
takes up little space
- + **EFFECTIVE IMPLEMENTATION OF THE SOLUTION**
including TOTAL the bituminous mass production plant in Ścinawa

APPLICATION AREAS:

- PRODUCTION IN THE CHEMICAL INDUSTRY
- LIVESTOCK INDUSTRY
- INCINERATORS
- UTILIZATION OF MILITARY GASES

General

We believe that constantly asking ourselves questions about the future brings us closer to learning universal principles.

Our reply to the future is industrial application of microwave technology.

We are global experts in this field with 15 years' experience in designing.

MOS – Our advantage lies in:

- 1 It is the Application of microwave technology to afterburning of gases.
- 2 Positioning of microwave generators allowing optimization of field concentration.
- 3 A process control system reducing process gases to almost non-emission level

TEAM

Adam Sokołowski, PhD., Eng.

Professor of Wrocław University of Technology

Involved in engineering of dispersed systems, surface physicochemistry and ionic liquids in separation processes. He manages research works.

Krzysztof Hawryszczuk

Founder of the company Usagi

CEO at Daytona Lubricants. Many years of experience in strategic management.

Robert Barczyk, MSc., Eng.

Inventor of the MTT Microwave Thermal Treatment method

Team Chief Engineer responsible for the development of HR 200 and MOS installations, patent owner.

Monika Świerc

Founder of the company Usagi

Owner of the lubricant brand Daytona Lubricants. Many years of experience in operational activities.
