PRODUCTION

STEKOP is involved in the development and production of apparatus incorporated in advanced electronic security systems. Our products meet the most stringent standards prevailing in the electronic security systems market.

The high rank of STEKOP in the field of security technologies results, among other things, from the fact that we employ experts for many years making up a stable design and development team, in their daily work utilising immense practical experience accumulated in finalising multitudes of solutions.

Besides integrated security systems, STEKOP offers specialised fire alarm monitoring system, which, as one of very few systems of this type that, meets all standards and requirements currently in force, which is testified by the Certificate of Conformity CE and CNBOP-PIB Product Acceptance Certificate.

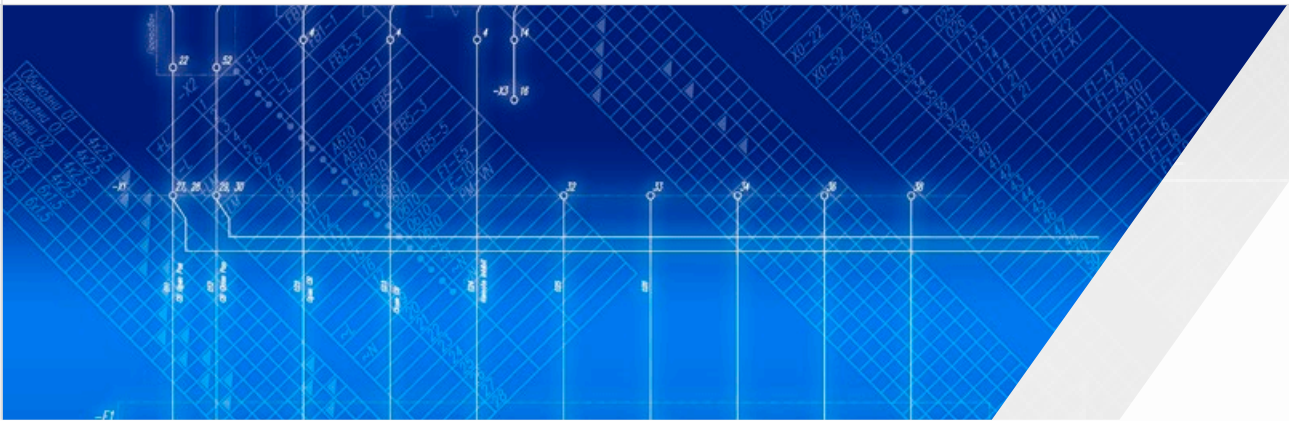

In recent years, STEKOP's engineers have been realizing the advanced project of autonomous vehicle type A-UGV. This vehicle was designed to recognize hazards in open area or along programmed routes.

STEKOP offers the following product lines:

- PERIMETER SECURITY SYSTEMS:
HF500 type in-ground digital EM sensor - unique technology in the world only a few significant producers in the world ,
BM120 200C type family of digital microwave barriers.
- SYSTEM DIONE - wireless alarm control unit controlled by smartphone - dedicated for home security.
- PALLADION Centralised Security management System - the system is dedicated for extensive monitoring networks, in most cases based on legacy IP network structure LAN/WAN.
- ULISSES Integrating System - a system designed for managing the security of one building or a complex of buildings.
- STAP2009 Fire Monitoring System Certified for Poland - one of the latest solutions of this type in the market.
- Access Control System - technologically advanced solutions.
- Hazard Monitoring Systems with a whole range of alarm transmitters (radio, dialler, GPRS, LAN/WAN).
- Alarm switch-boards for autonomous and network operation.
- Fire Extinguishing Aerosol Generators - firefighting devices compatible with automated fire detection and extinguishing systems.

TECHNICAL INSTALLATIONS AND PROJECTS SECURITY SYSTEMS AND BMS

The Design and Installation Department specialises in the delivery of comprehensive solutions for security systems, telecommunication technical installations, power energy installations, building automation, with the integration of all systems.

Our services include consulting, design, construction and maintenance services for the completed systems and installations. Moreover, with complete satisfaction of our Clients and effective operation in mind, we have extended our offer to include professional general building works.

Our vast experience in the provision of services for military area, airports, banks, large industrial and commercial objects, open-

-minded approach to every task, as well as the precision of our decisions, guarantee finalisation of your project at the highest possible level and in line with the plan. Relying on our know-how, we work professionally and comprehensively, adapting to the needs and individual requirements of every investor.

At every stage of the undertaking, we provide advice and help in the selection of the best solution, utilising state-of-the-art technologies, with the particular needs and investment type in mind. We are not afraid to take up new challenges and we are willing to complete difficult and non-standard orders to the very end. The full support and rapport with the investor is the source of joint success and satisfaction of us and our Clients.

SECURITY SERVICES

The Security Department is involved in carrying out all over Poland the wide range of personal and property security services for businesses and private persons aiming at prevention, active protection of persons and property, active interventions and supervision over technical security systems.

These tasks are realised with the help of highly qualified security staff, equipped adequately to the hazard and client's requirements: firearms, coercive means, personal protection and communication means, vehicles.

Security staff are supported by motorised intervention patrols composed of effectively trained and equipped security staff.

Whilst providing physical security services we utilise state-of-the-art technical solutions, which increases the safety of our Clients and, in the long run, lets us generate significant savings.

We offer physical protection for the wide spectrum of building complexes, ranging from military units and banks, through the protection of commercial and industrial objects, logistics centres, housing estates, to construction sites and public utility complexes.

ALARM MONITORING

STEKOP is one of the leading companies involved in alarm monitoring services. At the beginning of the 1990s, the alarm monitoring system we designed called SEZAM became the driver of growth of monitoring services in Poland. Our solutions are utilised by the first in Poland company SEZAM that started to offer these services domestically.

The Polish Monitoring Centre enables monitoring of local alarm systems in fixed location objects (flats, residential buildings, institutions, banks, etc.) and movable objects vehicles, as well as visual monitoring from local CCTV systems. .

We have one of the best organised monitoring centres in Poland, which monitors objects and manages intervention units all over Poland. Thanks to signing a cooperation agreements with a few dozen security agencies guaranteeing the response of professional intervention units, we are able to provide protection to clients having locations spread all over Poland. For extra security, we deployed Alternate Centres, which can at any time take over the functions of the main Centre.
