NATURE'S COVER

## Viaplant is a creative material for **interior, furniture and fashion design.**

Viaplant is a special material made from a fine selection of 12 different plant residuals. Viaplant panels are manufactured with a proprietary engineering technique that preserves the plant component inside the material, displaying a vast variety of natural colours and textures and creates artistic details.

We took this creative plant based composite material and created our light and furniture collection, a standalone product range given the innovative material component.

### repurposed

mark of nature and engineering design

We re-imagined the re-use of plant parts generated and discarded during the maintenance of urban green spaces. Amongst others we also see beauty in aggressively spreading invasive species (e.g. ragweed, reed, Canadian goldenrod, etc.) as well, and re-utilise them. We only use plant parts – leaves and flowers – whose regeneration cycle is one year or less. We consider as very important the local sourcing of all our natural materials, and that the entire work process is carried out in Hungary.

### visual aesthetics, experience, atmosphere

it's not 'like that', it's 'exactly that'

Viaplant does not imitate nature, but is one and the same. Using real plants, it creates texture and appearance rich in colour and detail, and emits a wholly unique atmosphere once light shines through.

### timeless

always stylish

Thanks to the durable materials used and the aesthetics of nature, Viaplant does not follow passing trends, but opts for the truly long-term.

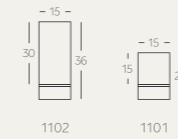

### personality

material's second layer is its story

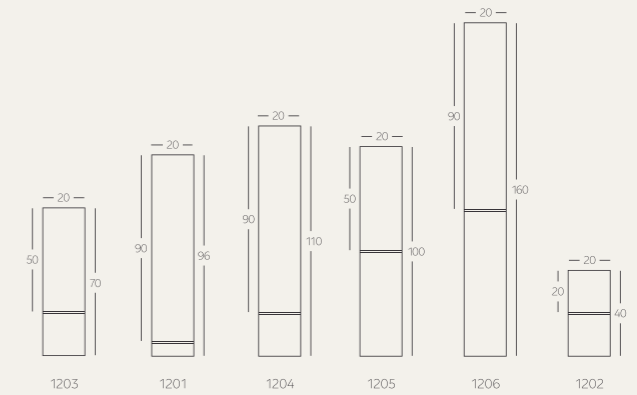

Wall tile, specials, lamp or furniture – Where the given plant comes from and what its story is makes all the difference. A leaf from a 500-year old lime tree, turf from a famous football pitch or a recycled bride's bouquet. A certain something that we can relate to.

## Poa Flori

grass with petals

A panel containing various types of grass, which retains its natural green colour due to the special drying process used. The popping red dots are created using the bright colour of pelargonium leaves.

## Calam-Triticum bushgrass-straw

The flowers of smallweed recall summer meadows. With its straw backdrop, the texture displays a friendly, homogenous tone and when illuminated, the exciting forms and shapes become even more spectacular.

## Phragmit reed

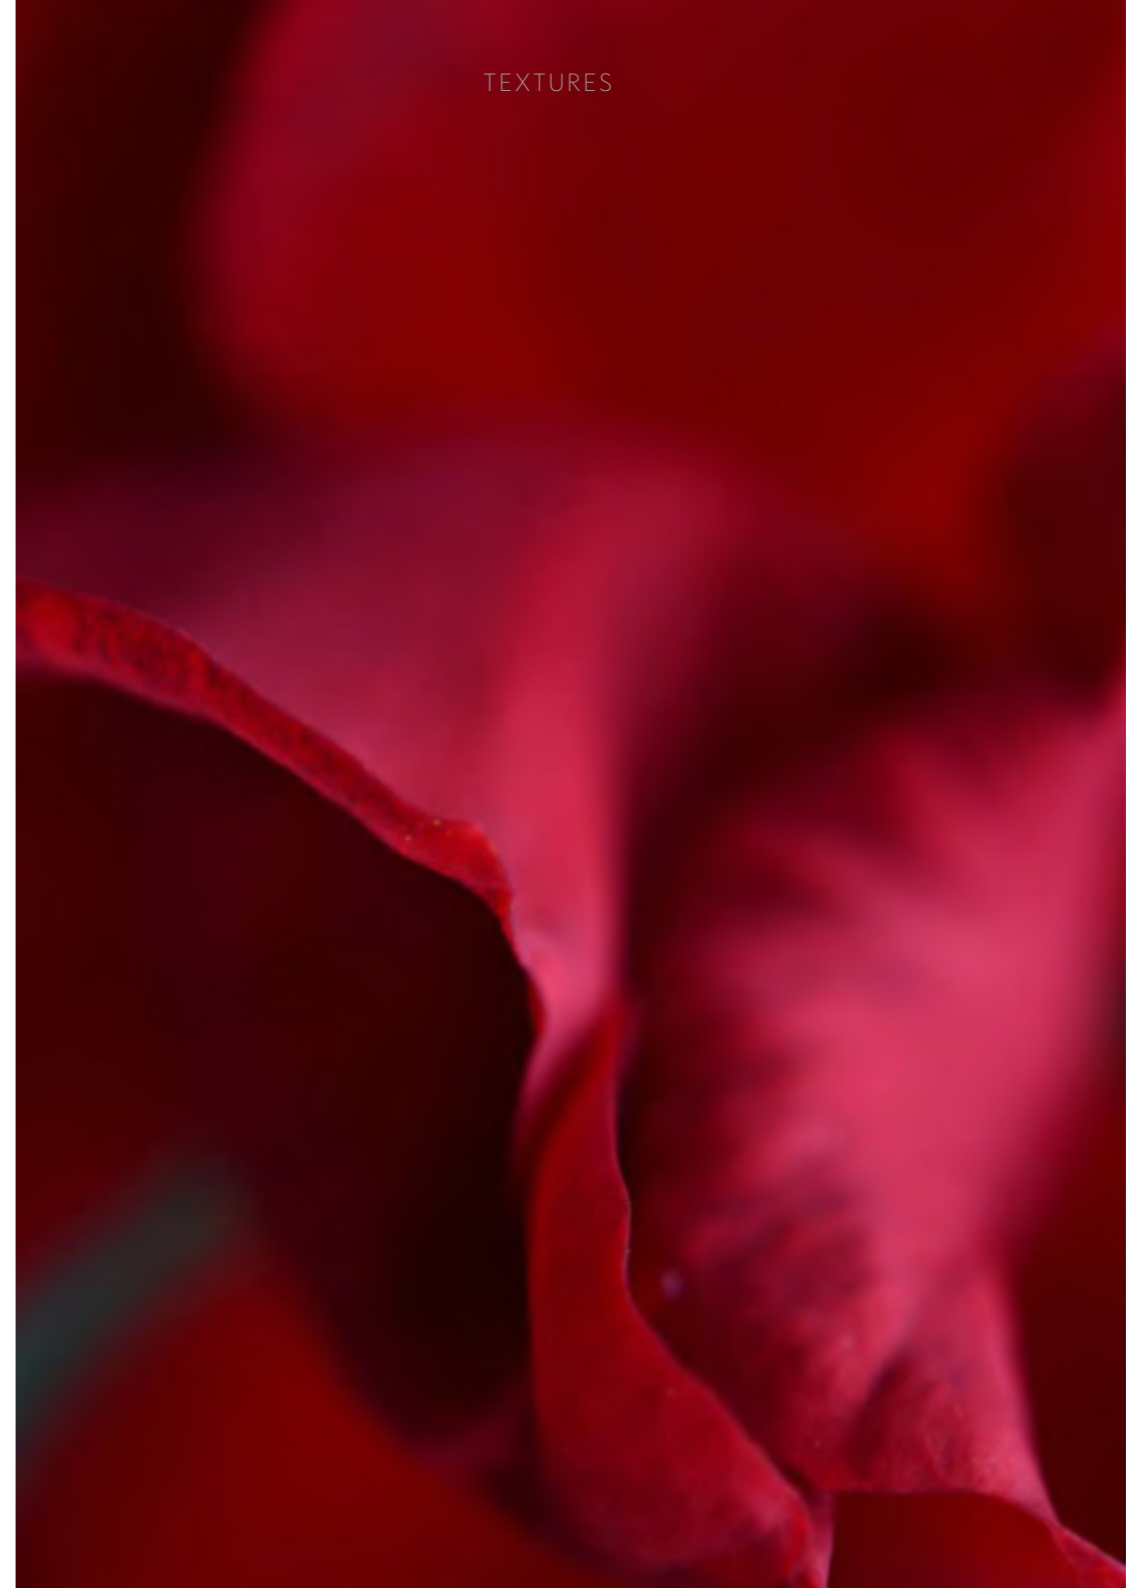

The patulous flowers of reed, with a straw backdrop, generate a flowing pattern and a busy, vibrant image. Characterised by soft texture and a golden brown hue, it is a model that can be illuminated to great effect.

## Rosa rose petals

Roses have been bred and cultivated for millennia for their decorative value. When illuminated, they create an atmosphere just as mystical as the stories weaved around them.

## Gramina Mix

painted hay, mix

We associate painted hay with endless opportunity. The texture with its playfulness and unpretentious appearance, enriches the interior of any home.

## Gramina Blue

Painted hay, blue

Cut grass, with boundless human imagination added. The coloured hay texture evokes a modern vision, and the light shade can be impressively illuminated.
