

HANDLOOMS SINCE 1971

KANDYGS

ABOUT US

Kandygs started with only 10 machines in 1971 but now has as many as 300 handlooms and 30 power looms housed within a number of weaving units. We also have a fully equipped dye house and a sewing unit.

Apart from our commitment to producing quality products, Kandygs supports the Handloom Industry by providing secure, fair employment and on the job training. We pride ourselves in having more than 300 trained weavers working in our units or from their own homes. These commitments add value to our products, but have also resulted in a number of national export and innovation awards. Kandygs successfully exports to Japan, Germany, United Kingdom, Netherlands, Norway, Sweden, and the Maldives.

KANDYGS

VERSATILITY IN COLOUR

Having worked for over 45 years with multiple countries, we understand that colour palettes are forever changing. We also understand that no two customers are alike, we are always willing to work with fresh, new colours or offer consultation if required.

We are constantly moving with the colours and are innovating new colour forecasts to suit the market

Inspired by nature and the environment around us, the keen eye of our designers allows us to produce a new range as per customer requirements.

From the warm, earthy tones of the ground, to the bright bold colours of the birds and to the subtle, graceful hues of the skies – we are constantly moving with the world and the colours that define it.

KANDYGS

CUSTOM-MADE DESIGNS

We are always willing to work with new ideas and welcome a dialogue with our customer so that we can reflect the themes and thoughts behind your hotel

Sample making is an intricate process. Our design team works closely with the weavers and those that handle the product to further monitor its progress ensuring customer satisfaction.

Having worked with handlooms for over four decades, we work its strengths to get the best possible design for your product, knowing the high quality standards required by the hotel industry

KANDYGS

HIGHEST QUALITY STANDARDS

We offer a variety different thicknesses for our textiles, this varies the density of the material which is determined by its end use. Our experienced technical and design team has the ability to make a versatile selection of fabric.

We use raw combed yarn of the highest quality, which is dyed and then woven. The fabric finally is mill finished for a better appearance.

Reactive dyes are most commonly used with cotton, they are used mostly for clothing (therefore the safest) and are of the highest quality as colour fastness is minimal.

KANDYGS

INNOVATIVE

Weaving with Bamboo Yarn

We always looking for new ways to make our products stand out in the market for their individuality

The sustainable material. Bamboo is one of the fastest growing plants, and it regenerates on it own. They are grown with minimal use of water and a good carbon sink. The bamboo yarn is made with the pulp of the bamboo plant.

The fabric is soft like cashmere, drapes like silk and has a natural sheen

Permeable and actively breathing like a ventilator

KANDYGS

RECENT PROJECTS

Having worked closely with the client we were able to capture the elegance and the serenity of the beach front villas, through the design and the colours.

With sustainability in mind, we used bamboo yarn which further added a soft feel to the textiles

We worked on

Curtaining – sheer white curtains.
Bed runners,
Cushion Covers,
Wall Art and
Floor rugs.

Loama, maldives

KANDYGS

RECENT PROJECTS

After working extensively with our design team,
