RURAL FOOD TASTE

CEYLON CINNAMON

Grade Alba, C5, C4, H1, H2

Sri Lanka is the world's largest producer and exporter of pure cinnamon to the world and pure Ceylon Cinnamon Suppliers from Sri Lanka claim 90% of global market share. Ceylon Cinnamon is grown and manufactured solely in Sri Lanka and those Cinnamon quills have standard lengths and diameters. The finest, thinnest and most expensive grade of Ceylon Cinnamon is named as the world's best Alba grade True Ceylon Cinnamon bark sticks (quills) with an exquisite taste and aroma. True Ceylon Cinnamon is also known as True Cinnamon, Real Cinnamon, and Pure Ceylon Cinnamon.

Ceylon Rural Food Products (Pvt) Ltd is the well-established food processing and manufacturing company in Sri Lanka widely expands their products to the globe. They produce each cinnamon stick through a hygienic way from the freshly harvested inner Bark of Ceylon Cinnamon trees with quality in CRFP and high guarantee can be given for those Alba grade true cinnamon products as the demanded company. The productions of Ceylon Alba cinnamon sticks in CRFP are slim and slender in shape with an exquisite taste of aroma.

That real Ceylon Cinnamon is a highly delicious spice and has many health benefits such as a supplement to treat various health problems with the digestive system, cholesterol, sugar levels, loss of appetite, to lose weight related problems and many more.

PEPPER (Black/White)

CRFP manufacture the best quality pepper seeds which contain more than 560g per liter. Among the other pepper exporters in the world, Sri Lanka is considered one of the leading producers of the best quality black pepper corns and has been a destination for top quality pepper corns. Sri Lankan pepper has a high level of piperine, compared to the other pepper exporters in the world and carries a taste quite similar to the renowned Malabar Pepper.

In Sri Lanka, pepper can be found as a home garden or a mid-range crop and mainly cultivated in low and mid-crop in Sri Lanka. It is mainly cultivated in low and mid regions with a cooler climate in Sri Lanka. Among Sri Lankan pepper corns, traditional pepper corns have the best quality pepper with the perfect blend of flavor and aroma. CRFP is processed and distributed in those types of quality traditional pepper corns. Those black peppercorns are picked when they're almost ripe and dehydrated in standard conditions, turning the outer layer black.

RURAL FOOD TASTE

TAMARIND

Tamarinds are leguminous trees because they produce fruit in the form of a bean-like pod. This bean contains a sour pulp that becomes very sweet as it ripens. People eat the fruit raw and also use its pulp in cooking.

Amino acids, the building blocks of protein, are necessary for the body to grow and repair tissues. Some amino acids are essential, meaning that the body can't synthesize them, so people must get them from food. Tamarind contains significant amounts of all the essential amino acids except tryptophan. It meets the standards of the World Health Organization for an ideal protein for the other amino acids..

This fruit has many uses. It's used for cooking, health and household purposes. The polyphenols in tamarind have antioxidant and anti-inflammatory properties. These can protect against diseases such as heart disease, cancer and diabetes. The seed extract may also help lower blood sugar, while the pulp extract may help you lose body weight and reverse fatty liver disease

Tamarind is exported as raw pods and pulp which is removed from the shell and seeds in CRFP.

DEHYDRATE FOODS

Dehydrated fruits & vegetables are produced in high quality such as mango, bilimbi, ginger, curry leaves, pandan leaves, banana flowers and etc.
