## OUR PRODUCTS

Our **Novamix** line is an **animal protein of bovine origin** extracted through a physical process with controlled parameters. This guarantees the final product's **texture and juiciness**. Due to its molecular structure, it easily binds with other proteins, water and fat, forming a solid network. This allows for the **absorption of water** and, at the same time, the **extension of the product's useful life**.

Our **Almaprot** line is a **plant-based protein** extracted through a **high-moisture extrusion process**, modifying its molecular structures and providing a **fibrous texture**. Due to its low-fat content and highest percentage of protein, it **adds nutritional value** to food products.

. Certification in process: **FSSC 22.000**
