What is Riltech, and what do we do?

Riltech is a software engineering firm headquartered in Budapest, Hungary

Founded in 2018, we have spent the past seven years honing the technical expertise, leadership capabilities, and high-level communication skills needed to deliver impactful digital products, on an international level.

We believe that building a scalable digital organization starts with a rock-solid engineering foundation—something we help establish from day one.

Team Augmentation

Allows you to seamlessly extend your engineering capacity by specifying the roles and responsibilities you need. We provide highly skilled professionals who integrate closely with your in-house teams—ensuring alignment, efficiency, and impact from day one.

IDEAL FOR

- Improving engineering squads and capabilities
- Finding the right talent for the right position
- Struggling with delivery pressure

SETUP CHARACTERISTICS

- Highly capable individuals
- Increased delivery capability
- Day-to-day integration

Project Assignment

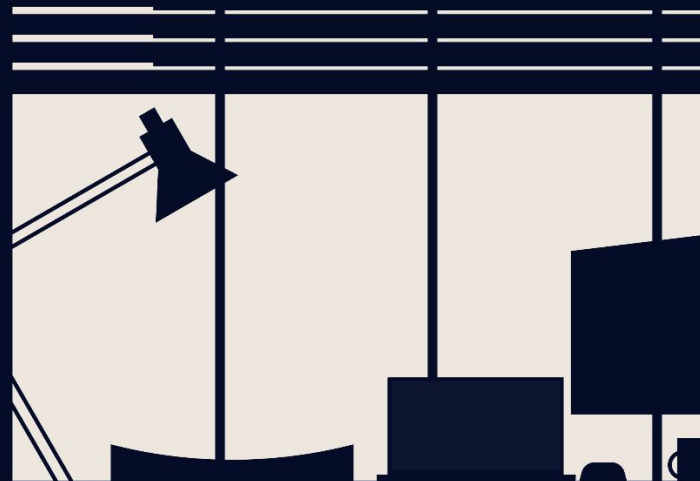

In a project-based engagement, you provide the business-level scope, and we take it from there—developing a comprehensive solution design that includes business and technical requirements, high-level architecture, UI design and clearly defined deliverables.

IDEAL FOR

- Delivering digital products without internal software engineering capabilities
- Enterprises lacking resources, capability or competitive agility to deliver smaller products
- Venture capitalists looking for early stage delivery insurance

SETUP CHARACTERISTICS

- Potentially end-to-end service
- Precise testing, documentation and handover
- Possible long-term maintenance support

Special Assignment

Tailored for situations where you need more than just a senior engineer—you need a high-impact individual with deep technical expertise, strong product thinking, and sharp business insight. Our professionals are helping to drive planning, design, and execution with strategic alignment across teams.

IDEAL FOR

- Early stage products without clear technical roadmaps and estimations
- Investors looking for technical screening and/or feasibility review for potential investments
- Technical support in significant architecture redesign processes

SETUP CHARACTERISTICS

- Custom responsibility and availability
- Blurs the line between implementation and consultation
- Provides continuous high level engineering support

Fintech

Partners we have been working with

LUNAR[®]

LUNAR 2018 - 2024 

Lunar is a digital challenger bank with a mission to simplify and enrich people's financial lives, empower, and put them back in control by building the best everyday bank in the Nordics.

ABB 2020 

ABB (formerly known as International Bank of Azerbaijan) is the largest bank in Azerbaijan, it's an open joint-stock company whose shares are owned by the Azerbaijani state.

Alpheya

ALPHEYA 2024 - Present 

Alpheya offers a full suite of cloud-native, AI-powered wealthtech solutions designed to strip away the complexities of wealth management and deliver new opportunities for businesses.

Fintech

Experiences with Lunar Bank

Our collaboration began with Paylike, a payment gateway focused on simplifying payment integration for merchants. Our team was responsible for designing and developing microservices that supported the platform's core functionality. Following Paylike's acquisition by Lunar Bank, we took ownership of the design and implementation of mobile SDK suite, covering major native and cross-platform technologies including React Native, Flutter, Swift, and Kotlin.

- Developed comprehensive solution designs to secure engineering leadership buy-in
- Implemented, tested, and documented services in accordance with the approved solution design
- Defined a unified code architecture and integration interface for a suite of mobile SDKs
- Applied platform-specific best practices to ensure robust handling of 3D Secure (3DS) flows

LUNAR[®]

Fintech

Experiences with ABB

We joined the bank as solution architects to support its ongoing digital transformation. Initially, our focus was on implementing standard engineering practices and overhauling cloud infrastructure and deployment flows. Later, we led the redesign of the corporate banking domain—conducting a detailed analysis of the existing Oracle core banking system, evaluating third-party providers, and assessing the feasibility of developing a proprietary solution in-house.

- Redesigned and standardized deployment pipelines and CI processes to improve reliability and scalability
- Implemented platform-agnostic solutions to streamline mobile test build distribution
- Delivered a detailed feasibility study assessing the bank's internal engineering capabilities for building proprietary solutions
- Introduced and embedded modern agile methodologies within development teams to enhance delivery cadence and collaboration

OF AZERBAIJAN**

Fintech

Experiences with Alpheya

We've partnered with Alpheya for over a year, initially focusing on the design and development of backend and frontend services. Our team played a key role in shaping the company's cloud infrastructure, CI/CD pipelines, and deployment workflows across multiple squads. In the latter half of last year, we led the development of data operations, and this year, we've taken on the design and implementation of their trading and marketplace products.

- Designed and implemented full-stack services across backend and frontend systems
- Optimized data operations to resolve initial ingestion bottlenecks in large-scale data pipelines
- Automated CI/CD testing for core database migration processes to ensure reliability and consistency
- Designed and delivered integration SDKs to streamline client onboarding and system connectivity
