With a team of professional agronomists and trained personnel, we work closely with farmers and our Certification and Control Body, BioAgriCert Italia, conducting training programs, trials, and field days, thus educating them on how to follow sustainable organic agricultural practices, by avoiding the use of pesticides and chemical fertilizers, relying only on natural compost, proper crop rotation and biological pest for disease control in order to have an eco-friendly environment.

The close collaboration with organic certified farmers leads to offering high-quality products to our clients and full traceability system down to the plot the product has been harvested from.

In 2022 we finalized the investment on our first storage center situated on Lunca, Tulcea District.

The full capacity storage of 10.000 tones will assure :

- 🌱 the best storage conditions for our partners harvests;
- 🌱 flexible orders;
- 🌱 delivery terms according to clients expectations.

The geographical place of our storage center offers a great advantage to our company ahead of the competitors:

- is being situated in the most productive agricultural area of Romania – Dobrogea;
- this gives us quick access to the Danube river and Constanta Harbor, if we chose to deliver by ships and also to the main Romanian roads or railways infrastructure, according to our partners requests;
- is equipped with dryers working on gas.
